

About Javvo, Inc.

Javvo, Inc. was founded on the principle that education is a basic human right. Our goal is to make education accessible, affordable, and effective, and the methods we use to reach this goal make use of common technologies such as Java, Flash, and MySQL. We believe that for our e-learning software to be available universally, it should be cross-platform and should rely on open-source technologies.

In the summer of 2002, our team developed a web-based, asynchronous e-learning system based on an Application Server Provider (ASP) model. This involves the ability for instructors to create courses, grade students, and add course documents. The student can listen to lecture audio, follow lecture transcripts, keep up with course study guides, submit assignments for evaluation, and check grades. A demonstration of this e-learning course is available on our website at <http://www.javvo.com> as well as on our demo CD.

Javvo is a holding with different subsidiaries. The headquarters are in Switzerland, with a branch in Atlanta, Georgia, USA. We are currently evaluating opening branches in England Q3/03 and Germany Q4/03. This will enable us to help serve our customers better by being more accessible.

Currently we have the following subsidiaries:

JavvoDesign :

JavvoDesign is a cutting edge web-design company that uses state of the art technologies to help develop projects of all sizes for its customers. The tools being used are Macromedia Studio MX and Flash, as well as SQL, ASP, and ColdFusion, just to mention a few. Please view our portfolio as a reference.

JavvoHost :

JavvoHost is our own hosting subsidiary. The advantage of having our own hosting is that we know we can rely on our own servers and ensure high bandwidth, up-time and response time, since the entire chain is controlled and maintained by our highly skilled staff.

JavvoWireless :

JavvoWireless is our branch specializing in wireless technologies. We are currently in negotiations with several Internet service providers to start offering wireless Internet in remote areas of Switzerland, where high speed Internet cannot reach with conventional technologies. These services will be made available to businesses as well as households. We offer more than just Internet services - we also consult companies and hotels on how to implement wireless-LAN at their facilities. The range in our service varies from consulting to project management, implementation, and testing. This level of service is customized to our clients' individual needs.

JavvoR&D :

“making education accessible”

JavvoR&D is our R&D arm. We use the extensive experience that our staff has to work on new and exciting technologies that will revolutionize the way things work in today's system. This section will be updated regularly on breakthroughs that we have.

Senior Management

Casper Voogt, M.Arch., B.S.

Creative Director and co-founder

Mr. Voogt received his Master of Architecture from Princeton University in 2002, and completed his Bachelor of Science in 2000 at the Georgia Institute of Technology. Alongside his studies, he has designed and actively managed a number of websites as a freelancer. His extensive knowledge and keen eye for design are invaluable to us. This enables him to lead our team to consistently exceed our own expectations.

Ramin Javanmardy, B.Eng.

Technical Director and CEO

Mr. Javanmardy received his B.Eng. in 1997 from the University of Teesside. Mr. Javanmardy has started countless businesses that were all great success stories. He brings the wisdom and experience with him to steer Javvo through these unfriendly economic times. With his insight and guidance, Javvo is growing in times where the competition is laying off people.

Shahin Enayati

Business Director

Mr. Enayati is the founder of Philant, a non-profit organization whose purpose is "to provide sustainable solutions to the issues affecting the health and well being of economically disadvantaged people worldwide Growing up in India." He saw at an early age that some of the basic needs of the poor are not met. The vision now held by Philant holds five basic elements of medicine, nutrition, education, housing and environment as rights for all humanity. He offers his vast knowledge of development funding and his experience in socio-economic development in southeast Asia and in South America.
